Faraaj Haniif Apriansyah

Android developer (AI-assisted)

Serang, Banten | faraaj111@gmail.com | linkedin.com/in/faraaj-haniif-apriansyah-8079482a1
github.com/faraajs | faraaj.pages.dev

Profile

Communication Studies student at Untirta (semester 3) who builds Android apps with AI assistance. Two of them, Expense and Tidy, are released on GitHub as signed APKs. Open to part-time work and freelance projects.

Projects

Expense — Android, Kotlin, MIT license

- Reads supported Indonesian bank and e-wallet notifications and keeps the transactions in a ledger on the phone. AI features are optional and run on the user's own Gemini API key.
- Source: github.com/faraajs/expense

Tidy — Android, signed APK releases

- Converts screenshots and photos to AVIF or WebP on the phone to free up storage. Originals are kept by default. Needs Android 11 or newer.
- Source: github.com/faraajs/tidy

KelasRadar — Android, personal project

- Reads class WhatsApp group notifications and uses an LLM to pull out assignments, quizzes, and deadlines. Needs the user's own LLM API key.

Freelance

- Android apps (Kotlin, Jetpack Compose)
- Websites (Next.js, Tailwind CSS)
- Tools that call LLM APIs (Gemini, GPT, Claude)
